

Juggling with drainage

Juggling with drainage, is a totally simple game with an insane fun factor. By moving back and forth, a tennis ball can be thrown into the air and then caught again with the other side.

Material

- Cord
- Drainage tube (diameter approx. 10cm)

Run

The tennis ball should now be tried to get out of the tube by back/forward, down/up, movements and then caught again with the tube.

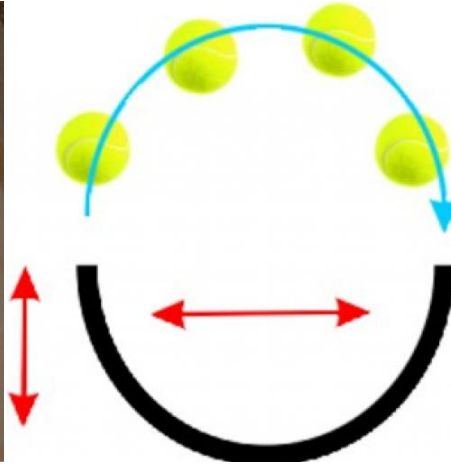

Building instructions

You only need a so-called drainage pipe with 10 cm diameter. There are in the hardware store and often at construction companies as waste pieces for free.

||

These two drainage pipe ends are then tied together with a cord.
