

## Soapbox race - Solar mobile

We organize a soapbox race with as little effort as possible. This can encourage the teenagers and children to build their own soapboxes.

### **Basic Idea / Goal:**

Soapbox racing? Yes!

This is how contacts are made with village and neighborhood residents and a relationship of trust can grow.

### **Duration / Period / Effort:**

The race takes place on a Saturday.

### **Suitable for:**

Teens and children in a village or neighborhood

### **Materials Needed:**

See under Design

### **Costs:**

We ask from the participants a contribution of about Fr. 10.-, are still looking for some sponsors and run a festive economy at which a profit is generated. With 50 participants the income and expenses amount to approx. 3'000.- each.

### **Execution of the project:**

With an organization team, the race day is prepared.

#### ■ **Responsible for race procedure**

They organize traffic boards, straw bales, fencing of the race track, timing, starting ramp, public address system and people for the actual race day.

#### ■ **Responsible for catering**

You organize benches, tables, food, drinks and staff for the sale. No alcohol will be served

#### ■ **Responsible for office work**

Authority contacts, permit requests, registrations, advertising the event in the parish newsletter of the local newspaper and with posters/handouts, start list (there is a lot to do), evaluation and

ranking, purchase of prizes/gifts

The race will be held in four categories (separated by age group). There will be a trial run for each participant as well as two applicable running times. Rules and regulations should be drawn up, including the penalty point system.

### **Important notes:**

Bad weather variants: Either the race will be canceled or a rescheduled date must be set in advance.

### **SOLARMOBILE**

The race could be done with solar mobiles. A group of the Blue Cross in Baselbiet has built a solar mobile itself.
