

Wooden hedgehog

From a piece of wood and some nails a hedgehog can be made easily and without much effort even with smaller children.

Material

- Wood
- Nails
- Hammer
- Saw

Instructions

Saw the piece of wood so that it can be laid somewhat straight and saw off one side at an angle (head).

||

Hammer in long nails with a hammer, but only so that they still stick out of the wood very long.

||

Paint two eyes on the part sawn off at an angle, glue them there, or even create them with nails driven almost all the way into the wood.
