## Make soap bubble device yourself

Here you will find a tutorial on how to make a simple bubble device yourself. This can be used for competitions, as it is possible to make long bubble snakes (more than 1 m long).

## Material

- 1 tube (approx. $10-15 \mathrm{~cm}$ )
- 1 scrap of fabric (e.g. from a sock)
- 1 rubber band

## Construction Instructions

Place the scrap of fabric over the pipe.
||
Fasten the scrap of fabric with a rubber band.

## Hints

- To create a soap bubble, simply dip the scrap of fabric into the soapy water and blow gently into the tube from behind.
- When blowing through the tube, it is important to not blow too hard. That's why this device is also good for smaller children, as it doesn't require much blowing.
- For the soapy water, you can follow this guide:make bubble lye
